

Nordic Swan Ecolabel on Clothes & Textiles

Webinar for manufacturers

17th and 21st of June

Agenda

1. Introduction to the Nordic Swan Ecolabel
2. The requirements
3. Licencing model
4. Fees
5. Application platform and process
6. Questions

A woman with blonde hair tied back, wearing a white lab coat, is looking at a white long-sleeved shirt hanging on a white hanger. The shirt is on a metal rack. In the background, there are other clothes on hangers and a large window with bright light. A dark blue circular graphic is overlaid on the left side of the image.

The Nordic Swan Ecolabel

The Nordic Swan Ecolabel

- The official ecolabel in the Nordic countries
- Among the world's most stringent and recognized environmental certifications
- Guiding consumers and professional procurers a guide to products that are among the environmentally best
- Giving manufacturers a recipe on how to develop more environmentally sustainable products

EU: Textiles have the fourth highest negative impact on the environment and climate change

Average annual consumption per person in the Nordic countries from 13 to 16 kg textile

Climate change

Estimated that the fashion industry is responsible for 10% of global carbon emissions

Harmful chemicals

About 2,450 different chemicals are identified for textile production and 1,150 of these are identified as harmful

Water pollution

About 20% of global clean water pollution comes from dyeing and finishing textile products

The green transition is happening now

Governments are developing regulations to facilitate the transition to a more sustainable textile industry.

EU Sustainable Textiles Strategy:

- Developing eco-design measures to ensure that textile products are fit for circularity
- Ensuring the uptake of secondary raw materials
- Tackling the presence of hazardous chemicals
- Empowering business and private consumers to choose sustainable textiles and get easy access to reuse and repair services

93%

Recognition in the Nordic countries

Nordic consumers want Nordic Swan Ecolabelled clothes and textiles

79%

want to choose environmentally friendly clothes

86%

find it difficult to know if the clothes they buy are environmentally friendly

7/10

would have chosen Nordic Swan Ecolabelled clothing if it was available

76 %

trust Swan-labelled products to be good
environmental choices

Attract Nordic brands and retailers that are serious about sustainability

- The most trusted ecolabel on clothes and textiles in the Nordics – known by 93% of the population
- Holistic requirements with a life cycle perspective
- Ensures traceability and control in value chain and sourcing
- Both consumers and public organizations demand more sustainable products labeled with a trustworthy independent label

Requirements for
Nordic Swan
Ecolabelled clothes
and textiles 5.0

Nordic Swan Ecolabelled clothes, textiles and leather

Reduced environmental impact throughout the lifecycle of the textile.

- Fibers
- Chemicals
- Product quality
- Energy and water
- Wastewater
- Workers rights and working conditions
- Animal welfare
- Packaging

Lifecycle based criteria

- Ban of incineration and landfill of unsold textiles
- Design for recycling – no accessories that are only for only for decoration
- Requirements for health and environmental harmful chemicals
- Packaging suited for recycling

- Test of the quality of the textile to give a longer product lifetime
- Requirements covers health properties of all chemicals used in the textile production
- Recycled fibres tested for harmful chemicals

24

- Reuse of textiles for re-design
- Recycled raw materials in synthetic fibres
- Organic cotton (B2C)
- Recycled or certified wooden raw materials

- Energy efficiency/climate impact
- Substitution of harmful chemicals
- Emissions to wastewater
- UN's International Labour Organization (ILO) conventions on workers' rights

Circular economy

Prolongs the lifetime of the product:

- Strict quality requirements
- Not allowed to design clothes with «wear» holes

Other:

- Unsold products cannot be burned or sent to landfill
- Re-design products is now possible
- Not allowed with metal-details with no purpose
- Strict chemical requirements
- Packaging materials can be recycled

Re-design products: Reuse of textiles to make new products

The used textiles must:

- Not come from the chemical and oil industries
- Textiles from the health care sector: Wash method to delete microorganisms
- No contain plastisol prints/details

In addition, must be previous certification or only be used for:

- furnishing fabrics such as rugs, tablecloths, blankets (not bed linen) and curtains
- adult clothing for consumers, but not underwear
- bags, purses, wallets, and other adult accessories

Hides/skins and leather

- Only hides and skins from sheep, goats, cows, horses, pigs, elk, deer, reindeer and fish (not red-listed) are allowed
- Re-design products are possible.
- Chromium content, and no cadmium or lead
- Chemical requirements
- Wastewater from tanneries
- Water and energy consumption for tanning
- Quality
- Unsold products cannot be burned or sent to landfill
- Packaging

Cotton (and other natural seed fibres of cellulose)

- Cotton must be 100% organic or recycled
- Alternative requirement for selected textiles for professional use, documenting the worst pesticides have not been used
- GMO-Free

Wool

Must originate from sheep, camel, alpaca, or goat

Must be one of these:

- Certified organic wool
- Recycled wool
- Conventional wool with low pesticide content in the raw wool

Requirements for wastewater from wool scouring.

Regenerated cellulose fibre:

- Recycled cellulosic raw materials or from approved tree species
- FSC or PEFC certified (virgin)
- If the fabric contains more than 30% then closed loop technology else low emissions

Synthetic fibre

- Must be based on either recycled or bio-based material.
- Test for loss of fibre fragments (microplastics)

Synthetic fibre

Recycled material:

- Must not come from plants that are EFSA or FDA approved as food contact material
- Test requirement for specific harmful chemicals

Bio-based material:

- Must not be based on palm oil, soybean oil and soy flour
- Must be waste or residual materials or GMO free (and for sugar cane in addition certified)

Chemical requirements

General requirements for all chemicals:

- Requirement for classifications of chemical products (harmful to the environment or health)
- Ban of all CMR classified ingoing substances
- Requirements for prohibited substances (e.g., endocrine disruptors and PFASs)

Chemical requirements

Additional requirements for specific process chemicals e.g.:

- Degradable detergents, softeners, complexing agents and sizing agents
- Prohibition of biocides and antibacterial substances
- Metal complex dyes and pigments
- Prohibition of chlorinated bleaching agents
- Chemicals that contain silicone (D4, D5 and D6)
- VOC in printing paste

Quality and function requirements

Updated:

- Stretching and shrinking
- Colour fastness to light
- Pilling

New:

- Tear strength
- Tensile strength
- Seam strength and slippage
- Colour fastness to perspiration and saliva
- Abrasion resistance

ILO Conventions

- Prohibition of forced labour
- Freedom of association, and protection of the right to organise and to conduct collective bargaining
- Prohibition of child labour
- No discrimination
- No violent treatment
- Workplace health and safety
- Fair pay
- Working hours

Working environment

- Manual and mechanical sandblasting or sanding of denim is prohibited.
- Potassium permanganate for the treatment of denim fabrics/products, is prohibited if used in open process
- Requirements on both environmental and health properties of all chemicals used in the textile production

Animal welfare

- Use of feathers and down plucked from live birds is prohibited.
- Use of feathers and down from forced feeding of birds is prohibited
- Mulesing are not permitted

BAT- techniques to reduce energy and water consumption

- **Energy management system** or a system for the management of CO2 emissions. For energy used for dyeing, printing and finishing.
- **Water consumption** must be measured for wet processes.
- Implemented a minimum of **BAT water and energy efficiency techniques** or in-house production of **solar energy**.

BAT themes	Production volume	
	<10 tonnes per day	>10 tonnes per day
1. General energy management	Two techniques	Three techniques
2. Washing and rinsing	One technique	Two techniques
3. Drying and curing using stretchers	One technique	Two techniques

BAT themes
<p>General techniques:</p> <ul style="list-style-type: none"> • Measuring how much is consumed and where • Process monitoring and automatic control systems for flow control, filling volumes, temperatures, and timings • Insulating pipes, valves, and flanges • Frequency-controlled electric motors and pumps • Closed design of machines to reduce evaporation losses • Reuse of water and liquids in batch processes • Combining multiple wet treatments into one process • Heat recovery, e.g., from washing, steam condensate, exhaust air from processes, exhaust gases from combustion • Solar thermal panels, solar photovoltaic panels, or a heat recovery system for used hot water, installed within the operation, and generating energy amounting to 30% of what the process requires
<p>Washing and rinsing:</p> <ul style="list-style-type: none"> • Using cooling water as process water • Replacing overflow tanks with drainage/inlet tanks • Using “intelligent” rinsing technologies with water flow control and counter flow • Installing a heat exchanger
<p>Drying and curing using stretchers:</p> <ul style="list-style-type: none"> • Optimising air circulation • Insulating the premises • Installing effective burner systems • Installing heat recovery systems

Packaging requirements

PVC (still) not allowed.

New requirements – All packaging materials:

- Materials in packaging must be possible to recycle in existing waste systems in the Nordic countries
- Only mono-materials can be used
- Multi-material hangers are allowed if collected and reused in a textile manufacturer's take-back system

Specific for plastic packaging

- Paper labels cannot be used
- Shall be made from either PE, PP or PET
- Coloring is only permitted if at least 50% by weight of the plastic is recycled material

5 minute break

The application
process, platforms
and fees

Two types of licence

Product licence

- Applicants: Brand owners
- The licence needed to get a Nordic Swan Ecolabelled product
- Based on one or more manufacturing licenses in addition to extra requirements

Manufacturing licence

- Applicants: Typically manufacturers, but also possible for brand owners
- Gives the right to manufacture for product licences within the product area specified in the licence.
- Does NOT give the right to communicate that any product is Nordic Swan Ecolabelled.
- If you renew a version 4 licence to vrs 5 it will become a manufacturing licenses.

Fees

Application fees

Manufacturing licences	Price in EUR ex VAT
New application	3.000
Application for renewal before the license has expired	1.500
More than one audit within the Nordics*	500 per extra audit
Audit, Europe	1.500 per audit
Audit, Outside Europe*	2.500 per audit
Extension of existing or changes in licence	< 4 hours: 375 < 8 hours: 750 ≥ 8 hours: 1,500

Annual Licence Fees until December 31st 2023

Licences based on vrs 4 / Manufacturing licences	Price in EUR ex VAT
For sales in the Nordic countries	0,3% of the Nordic Swan Ecolabelled products' turnover in the Nordic countries
Minimum fee the Nordics	2 000 EUR
Maximum fee the Nordics	100 000 EUR
For sales outside the Nordics (if the Nordic Swan Ecolabelled products have a turnover of more than 300 000 EUR outside the Nordic region)	2 000 EUR

Product licences (brand owners)	Price in EUR ex VAT
Annual Licence Fee	No fee in 2022 and 2023

Annual Licence Fees from January 1st 2024

Manufacturing licences	Price in EUR ex VAT
Annual Licence Fee (Global)	2.000

Product licences (brand owners)	Price in EUR ex VAT
Annual Licence Fee, Nordics	0,15 % of the products turnover in the Nordic countries up to 30 million EUR. 0,05% of the turnover that exceeds 30 million EUR
Minimum fee, Nordics	2.000
Annual fee for sale outside the Nordics	2.000 if the turnover exceeds 300 000 EUR of Nordic Swan Ecolabelled products sold outside the Nordics

The Nordic Ecolabelling portal - For applicants for Nordic Swan Ecolabel licence

Enables easier reuse of documentation and ensures better traceability

- Fill in and deliver application form
- Respond to requirements and have dialogue with your designated evaluator
- See the progress of applications
- Access to all your documentation
- Overview of your licences, ecolabelled products and ongoing applications

The image shows a laptop screen displaying the Nordic Ecolabelling portal's application form. The interface is clean and modern, with a navigation bar at the top containing links for LISTED PRODUCTS, APPLICATION, LICENCES, LICENCE PRODUCTS, CONTACTS, and BRANDS. The main content area is titled 'Application Information' and features several dropdown menus and text input fields. The form is divided into sections: 'Application Information' and 'Contact Persons in your Company'. The 'Application Information' section includes fields for Applicant, Ecolabel Type, Product Group Category, Criteria Group, and Criteria Group and Generation. The 'Contact Persons in your Company' section includes fields for Primary Application Contact, Primary Licence Contact, Marketing Contact, and Finance Contact (Turnover Reporting). A green 'SIGN & CREATE APPLICATION' button is visible at the top of the form.

Manufacturing of textiles, hides/skins and leather

Product group number: 039, Criteria version: 5.0

Introduction

You are here applying for a **manufacturing licence**. A manufacturing licence does not give the right to communicate that any product is Nordic Swan Ecolabelled or meets the requirements of the Nordic Swan Ecolabel.

Here you need to:

- Select the **textile items** you want to get approved for your manufacturing licence. [The textile item requirements are declared by you in the [Supply Chain Declaration portal](#)]
- Answer the requirements below.

A **product licence** is required to Nordic Swan Ecolabelled products. A product licence is always based on one or more manufacturing licenses and textile items.

A manufacturing license gives the right to produce for product licences within the product range specified by your textile items (defined by e.g. a given product type with a defined scope of materials and substances).

Here you can see all requirements for [Nordic Swan Ecolabelling of textiles, hides/skins, and leather generation 5](#).

APPLICATION INFORMATION

NAVIGATE CONTENT

- Manufacturing of textiles, hides/skins and leather
 - Introduction
 - General information about the manufacturing site
 - Name of the manufacturing licence
 - Lookup of textile items
 - Unsold textiles, skins and leather
 - COD, temperature and pH in wastewater from wet processes
 - Implementation of BAT for energy efficiency and water savings
 - Requirements for primary packaging
 - Prohibition of PVC
 - Recyclable packaging material
 - Design of recyclable packaging
 - Information on recycling
 - Chlorophenols, PCB and organotin compounds during transport and storage
 - Fundamental principles and rights at work
 - Annual follow up
 - Licence maintenance
 - Customer complaints
 - Traceability

COD, temperature and pH in wastewater from wet processes Not started

- Discharges of COD* (chemical oxygen demand) in wastewater from wet processes must not exceed 150 mg/l. Wastewater that is sent to municipal or other regional treatment plants is exempted. Test method: ISO 6060 or equivalent.
- The pH value of the wastewater released to the surface water must be between 6 and 9 (unless the pH value in the recipient lies outside this interval).
- The temperature of the wastewater released to the surface water shall be lower than 40°C (unless the temperature in the recipient is higher).

The applicant must have a procedure in place for annual testing in line with the requirement and for ensuring compliance with the requirement. Nordic Ecolabelling must be informed if the requirement is not fulfilled.

** For COD, measurement of PCOD, TOC or BOD may be used if a correlation to COD is evident.*

Is the wastewater from wet processes sent to municipal or other regional treatment plants? Yes No

Please select the textile item(s) connected to your manufacturing licence:

LOOKUP

If any of the textile items to be used are not found in the list, you need to register them in the Supply Chain Declaration Portal.

NEW MESSAGE

Unsold textiles, skins and leather

Not started

The Nordic Swan Ecolabelled unsold products and nonconformity productions must not be sent for incineration or dumped in landfill.

The manufacturer must inform Nordic Ecolabelling about how unsold products and nonconformity productions are dealt with.

This requirement covers the company's Nordic Ecolabelled production until the products are sold on to the next link in the value chain.

Textile item

Introduction

You are here declaring a **textile item**. A declared textile item does not give the right to communicate that any product is Nordic Swan.

A textile item is where most of the product specific requirements are to be declared. Textile items are declared in the Supply Chain Declaration Portal. A textile item is declared for a given product scope (product type with a defined scope of materials and substances) that the applicant for a production licence wants to get the right to produce for product licences.

Here you need to:

- Select the items your textile item will be based on. E.g. fabrics, accessories and chemicals. [Items are declared either by you or your supplier in the Supply Chain Declaration portal]
- Answer the areas of declaration below

If you have several items with the similar properties, we recommend that you start by answering for one item before adding more items to your application. When you have finished your declaration, you will be able to duplicate all your answers to a new item. Then you can change the properties that are different, such as item type. We recommend to get feedback on the first item before duplication.

A **product licence** is what is required to get Nordic Swan Ecolabelled products. The textile item is declared for a given product scope (a given product type with a defined scope of materials and substances) that an application for a product licence can be based on together with a **manufacturing licence**. In addition, an application for a product licence will need to answer on requirements related to the applicant and the end product.

Tips and recommendations

- Make sure to start a good dialogue with your suppliers: Especially chemical suppliers which needs to declare the chemical items you are using within the scope of your textile item
- Start with completing declaration of one item by item type. If you have more items with similar properties, later on you can copy your response
- Always “save” your responses and use “save and close” before leaving your answers.
- Get in touch with us in the Nordic Swan Ecolabel if you have any questions!

Questions?

Questions and answers

Here are questions answered in the chat as well as questions that were answered orally in the webinar the 17th of June. Please see [recording from 21st of June](#) for questions answered there.

We have SWAN Certification Product Licence, do we need to secure a Manufacturing Licence? [We are a vertical set up of knit garment manufacturer.]

Today (version 4) there are only one type of licence. There are no “product licences”. If you renew a version 4 licence to vrs 5 the licence will become a manufacturing license.

Starting from version 5.0 there are two types of licences: If you are a manufacturer then you need to have *manufacturing license*. In addition to get Nordic Swan Ecolabel products, your customer (the Brand owner) will need to have *product license*. The product licence is based on one or more manufacturing licenses in addition to extra requirements.

How do you test fragmentation of microplastics?

The TMC (The Microfiber Consortium)) test method or future equivalent EN / ISO standards. ISO/DIS 4484-1.

Questions and answers

Who will inspect us and will confirm for the Nordic Swan Ecolabel ?

We at the Nordic Ecolabelling will confirm that documentation is according to the requirements, and we will also come for inspection visit.

Do you have any agent or office in Turkey ?

No.

I see it as challenging that paper labels cannot be used on plastic packaging. Any good input on this from participants?

So far we have only received a few comments seeing this as a challenge while others don't think this is a problem. When we have more applications and get more experience and details we may look into this if we this turns out is a problem. The reason for the requirement is that paper fibers are very harmful if they are in the plastic when you try to recycle it. The preferable is to use labels that are of the same plastic type as the plastic packaging.

Questions and answers

Which additional requirements are present if we have EU Ecolabel on our fabrics ?

The new version 5. of the Nordic Swan Ecolabel requirements for textiles have a strong focus on circular economy and are quite different then the current EU requirements. Hence for most of the requirements for the Nordic Swan Ecolabel you will need separate documentation even though you have a EU Ecolabel licence. Maybe a few of the quality requirements may be reused, it will depend on what type of product we are talking about. The current EU Ecolabel requirements are from 2014 and they are going to be revised, so the requirements might get closer to the Nordic Swan Ecolabel vrs 5.0 in the future.

Will we get a link that we need to mail to our chemical suppliers so they can declare in the supply chain declaration portal?

When you have applied for a manufacturing licence and have been assigned an application evaluator you will receive a link to the Power of Attorney for the Supply Chain Declaration portal that both you and suppliers such as your chemical suppliers need to fill in to get login credentials for the SCD-portal.

When a supplier are to declare items they need to state which customer (you) which are to use their item and in which application (ID nr). Hence you should not ask them to do this before you have submitted an application for Nordic Swan Ecolabel licence.

Questions and answers

Will the total annual fee for a given product amount to 0.45% (0.30% for brand owner+0.15% for production) and then yearly manufacturing licens of EUR 2000?

No. In 2022 and 2023 there are no annual licence fee for the product licence (brand owners).

In 2022 and 2023 the annual licence fees is 0,3% based on turnover of the licence holder of vrs 4 licenses /Manufacturing licences.

From 1st of January 2024 onwards, only the Brand owners having product license will pay a turnover based licence fee. And it will be 0.15%. Licencees of manufacturing licensee will only pay 2000 euros.

Please be aware it is the turnover of the Nordic Swan Ecolabelled products that is the basis for the calculation.

My yarn, fabric and dyeing supplier has Ecotex and GOTS certification, so will it be workable with your eco label ?

The requirements are different in the Nordic Swan Ecolabel, e.g. the requirements regarding ingoing substances in chemicals products are 0 ppm in the Nordic Swan Ecolabel. So generally Ecotex and GOTS can not directly be reused for the Nordic Swan Ecolabel. However, for some requiriments parts can be reused, e.g. if fibres are GOTS certified then it can be used for documentation for organic fibers.

Questions and answers

Is there a deadline for doing these actions (uploading files, applying for a license etc.)?

There is no deadline for when to start. But if you have a license and want to keep this you must apply for a renewal of your licence and complete the application before your licence expires (31st of December 2023). We recommend to start the process soon. For example after the summer holidays.

For brand owners (your customers) to get 50% off the application fee they need to submit their application for product licence in 2022.

Thank you!

Please get in touch with your contact person or representative in your certifying country if you have any questions.
